The free reader can be downloaded from 3D Modeling Software.3D Objects and Models 3D Objects and Models Introduction: 3D Objects and Models is designed to create all aspects of 3D object modeling including: Loading 3D Objects to the Design Workstation 3D Objects are transformed into 3D object data using a variety of modeling techniques and software. Most 3D modeling software allows the use of 3D objects as a starting point. Once 3D object data has been created, many of the commonly used applications such as the Design Workstation and CAD Converter can be used to modify and convert the 3D data into a CAD file format. Convert 3D Object Data to CAD Formats Converting the 3D object data to CAD formats can be a challenge. Many of the commonly used CAD applications may have to be reprogrammed or completely redesigned to deal with the geometric shape of the 3D data. In addition, the 3D object may need to be broken down into multiple parts in order to be placed within the CAD applications. Loading a 3D object: 3D object data is loaded into the design workstation in the format used to create the data. Loading 3D Objects Using a CAD Application Once the 3D object data has been loaded into the design workstation, it can be placed within the application. A variety of commonly used 3D CAD applications have been designed to take advantage of the easy-to-use features of 3D object data. Reprogramming or Redesigning CAD Applications The CAD application may need to be reprogrammed or completely redesigned to take advantage of the 3D object data. To do this, 3D CAD software applications normally have a Viewport option that allows the user to switch to the "Edit" view of the application. In this view, the user can start to modify the view as desired. The user can then make any changes to the data that are required. The changes made in the viewport will then be incorporated into the design. Starting with the CAD Application The following 3D CAD application can be used to view and convert 3D object data. This application also has a viewport for editing the
